

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application.

1. – 21. (Cancelled).

22. (Currently Amended) The air flow through air freshening member for a vehicle cabin air circulating system as defined in of claim ~~[[7]]~~ 26, wherein said pockets ~~members~~ comprise include bars having a triangular cross-section and stretching extending over the entire width of said base strip, said bars whereupon such triangular shaped bars being configured to fit into and fill said between the pleats of said the air filter frame.

23. (Currently Amended) The air flow through air freshening member for a vehicle cabin air circulating system as defined in of claim ~~[[17]]~~ 26, wherein said base strip containing said pocket members ~~comprises~~ is in the form of a continuous roll of such air freshening material suitable for cutting to length and applying to said the air filter frame.

24. (Currently Amended) The air flow through air freshening member for a vehicle cabin air circulating system as defined in of claim ~~[[7]]~~ 26, wherein said pockets ~~members~~ comprise include bars having a rectangular cross-section and stretching extending over the entire width of said base strip, said bars whereupon such rectangular shaped bars being configured to fit into said between the pleats of said the air filter frame.

25. (Canceled)

26. (New) An air flow through air freshening member for a vehicle cabin air circulating system comprising:

- a base strip of porous material;

- a plurality of individual pockets defined by a porous material and extending from said base strip at positions spaced apart from one another longitudinally along said base strip; and

- a particulate material having an air freshening substance releasably retained therein and held in said pockets;

- wherein said pockets are spaced along said strip so as to fit between pleats of an air filter frame insertable into the vehicle cabin air circulating system.

27. (New) The air flow through air freshening member of claim 26, wherein each of said plurality of pockets is a folded structure defining a loop adjacent said base strip.

28. (New) The air flow through air freshening member of claim 26, wherein each of said pockets is fusion bonded to said base strip.

29. (New) The air flow through air freshening member of claim 26, wherein said base strip and said pockets are made from a common layer of porous material.

30. (New) An air freshening system for a vehicle cabin, comprising:

an air filter frame configured for insertion into an air circulating system, said air filter frame having a plurality of pleats;

a base strip of porous material;

a plurality of individual pockets defined by a porous material and extending from said base strip at positions spaced apart from one another longitudinally along said base strip and coupled to said frame between said plurality of pleats; and

a particulate material having an air freshening substance releasably retained therein and held in said pockets.
